Supply Chain Scenario Document

1. Company Type

NW Wine Company (Casparian Production LLC) operates as a vertically integrated wine business. The company functions as a grape producer (vineyard owner and grower), wine processor (custom crush and winemaking services), and wine trader/supplier through private label and bulk wine sales.

Address : 20980, NE Niederberger Rd, Dundee, OR 971115

Phone Number : 503.4760203

2. Products Handled

Raw Agricultural Products:

- Organic and conventional wine grapes (Pinot Noir, Chardonnay, Sauvignon Blanc, Riesling, Gamay, Chenin Blanc, Mencia).

Processed Products:

- Bulk wine (red and white varieties).

- Bottled wines under estate and private labels.

- Custom/private label wine products for clients.

3. Supply Chain Flow

1. Vineyard Production: Grapes are cultivated in estate vineyards following organic farming standards where applicable.
2. Harvesting: Grapes are harvested and transported to the winery facility.
3. Processing: Grapes undergo crushing, fermentation, aging, and finishing processes.
4. Packaging: Wine is bottled under company-owned brands or private labels, or stored as bulk wine.
5. Distribution: Bottled and bulk wine products are sold to distributors, retailers, restaurants, or private clients.

4. Suppliers & Buyers

Suppliers:

- Estate-owned vineyards.

- Potential third-party certified organic grape suppliers .

Buyers:

- Wine distributors and retailers.

- Restaurants and hospitality businesses.

- Private label clients and wine entrepreneurs.

- Other wineries purchasing bulk wine.

5. Certification Scope Usage

The company is certified under USDA Organic regulations for crops. Organic certification applies to vineyard production and may extend to processing operations when organic grapes are used for certified organic wine production. The certification requires segregation, traceability, and compliance with organic handling standards.

6. Risk Points in the Supply Chain

- Cross-contamination risk between organic and non-organic grapes during harvesting and processing.
- Inadequate cleaning of shared equipment used for both certified and conventional production.
- Traceability risks during fermentation, aging, and bottling.
- Storage risks if organic and non-organic wines are not properly segregated.
- Supplier compliance risk if third-party growers are involved.
- Transportation risk during bulk wine transfer.
